

ABSTRACT

Disclosed are binding proteins that specifically bind to  
an isolated and purified peptide comprising a leucine  
positioned two peptide bonds away from a tyrosine-arginine  
5 pair. Other binding proteins of the invention include those  
that specifically bind to an isolated and purified peptide  
with the sequence cysteine-blank-blank-proline-histidine-  
blank-blank-blank-cysteine or cysteine-blank-proline-  
histidine-blank-proline-blank-blank-cysteine.
